Event

IDA EXPERIENCE

The Infocomm Experience Centre (iExperience) was launched on 17 June 2010 by Mr Lui Tuck Yew, the Acting Minister for Information, Communications and the Arts. iExperience aims to bring about the possibilities and benefits of Next Generation (Next Gen) services and the Next Gen Nationwide Broadband Network (Next Gen NBN) to the public and businesses. The interactive and engaging exhibits are designed to educate visitors via hands-on experience with the possibilities presented by Next Gen NBN, including possible Next Gen services leveraging Next Gen technologies that encompass our daily lives.

Since late last year, NEC Environment and Energy Solutions team has successfully deployed EcoMonitor, our active energy monitoring system at iExperience, in order to showcase its energy management and energy tracking capabilities. EcoMonitor uses sensors installed at the electrical distribution board to monitor the real-time electricity consumption of various zones within iExperience. This information can be accessed via a comprehensive web-based dashboard, allowing users to view data with much flexibility, such as viewing by specific zones or specific periods of time. The dashboard is also equipped with business intelligence enabling breakdown of top consumers, comparison tools, and alert settings.

This weekend, on the 22nd and 23rd of January 2011, the Infocomm Development Authority of Singapore (IDA) is organizing a special event – Carnival @ iExperience – to showcase all the exhibits on display at the Experience Centre. Do take time to attend this event and discover the power of Next Gen Nationwide Broadband Network, and be sure to have your hands-on experience at navigating our EcoMonitor dashboard on display!

About

NEC APAC Environment & Energy Solutions

We are a dedicated team whose focus is on Sustainability and Energy Efficiency in corporate Singapore, and we believe in empowering Smart Cities with our Smart Grid and our suite of Energy Efficiency-related technologies. If you are wondering what it is that we do, we have sub-divided into 4 main categories (but not limited to), our areas of specialization: eMetering, eStorage, eMobility and eMS.
